August 31, 1999

Dear Colleague:

On behalf of the Rural Health Policy Council (RHPC), I am pleased to provide you the Council's report, *Licensed Primary Care Clinics in Rural Areas, Selected Patient, Utilization, and Financial Data, 1995, 1996, and 1997*.

This *Report* continues the Policy Council's commitment to provide ongoing information to California's rural health field. This report presents data that clinics reported to the Office of Statewide Health Planning and Development (OSHPD) for calendar years 1995, 1996, and 1997. The Policy Council plans to publish the next clinic report in the spring of 2000, which will include the data in this report and the 1998 data reported to OSHPD. The clinic report will eventually present five years of comparable information. (A copy of this report can be obtained by calling the RHPC Office, or can be viewed or downloaded by accessing the RHPC website, <http://www.ruralhealth.ca.gov>)

The Policy Council is grateful for the assistance of the California Primary Care Association and the input they provided which helped make this report valuable to rural constituents.

We hope you find this report informative and useful.

Sincerely,

A black rectangular box containing a white, handwritten signature that reads "Stephen W. Mayberg, Ph.D.".

Stephen W. Mayberg, Ph.D., Chairman
Rural Health Policy Council

Introduction

California Population

Eighty percent of California's land mass is rural. In the 1990 U.S. Census, the rural population of California totaled 3.7 million and, according to estimates, 4.3 million in 1996.

Although rural populations continue to grow, California's rural population, as a percent of the total California population, is unchanged from the 1990 U.S. Census to the 1996 estimates.

Medical Service Study Areas

California is divided into Medical Service Study Areas (MSSAs), a sub-county geographic area defined by the California Office of Statewide Health Planning and Development (OSHPD). There are 206 rural MSSAs in California. The definition of rural, as defined by the Rural Health Policy Council for this report, is an MSSA where the population does not exceed 250 persons per square mile and does not wholly contain an incorporated area of greater than 50,000 population.

Using these definitions and 1996 estimated population data, 13.3% (4.3 million) of the California population resides in rural Medical Service Study Areas (see MSSA maps in Appendix B).

Licensed Primary Care Clinics

Primary care clinics are one of the cornerstones of the rural healthcare delivery system providing access to primary medical care, obstetrical care, and frequently to dental and behavioral medicine, health education, and other health-related areas. They are important "safety-net" providers in rural California.

This report focuses on licensed nonprofit primary care clinics in California which prepare and file financial, utilization, and patient profile data reports with OSHPD each year for the previous calendar year (see map in Appendix E). This is required pursuant to Section 1216

of the California Health and Safety Code. Hospital (provider-based) and proprietary (for-profit) Rural Health Clinics are not required to report to OSHPD. Therefore, the data in this report do not reflect the activities of those clinics (see maps in Appendix E).

Types of Clinics

Community and Migrant Health Centers are types of public or nonprofit organizations which receive federal support under Section 330 and 329 (respectively) of the Public Health Service Act to provide comprehensive primary care services to "medically underserved populations." Migrant Health Centers provide primary care to migrant and seasonal agricultural workers and their families.

Community Health Centers are located in rural and urban communities and can be designated as Federally Qualified Health Centers (FQHCs), FQHC look-alikes, and Rural Health Clinics (RHCs) of which there are several variations. There are ownership, staffing, board, services, and reimbursement differences for each type. See Appendix C for detail.

FQHC status allows a Community Health Center to receive cost-based Medicaid (Medi-Cal) and Medicare reimbursement. FQHC look-alikes qualify as FQHCs but do not receive Section 330 grants.

RHCs are established pursuant to Public Law 95-210 and are located only in rural areas as defined by the U.S. Census Bureau. An RHC may be either provider-based (i.e., an integral part of a hospital, nursing home or home health agency), or it can be an independent clinic housed in a permanent or mobile structure.

An independent RHC can be privately or publicly owned and operate either on a profit or nonprofit basis. RHCs can be a physician's private practice converted to an RHC (for-

profit), a free-standing, nonprofit clinic owned by a physician or corporation, or a clinic operated by local government (county or city).

All FQHCs, FQHC look-alikes and nonprofit RHCs are required by federal or state regulations to provide a sliding fee scale discount to income eligible uninsured patients. See *Table 1*.

Licensed Nonprofit Primary Care Clinics in Rural Areas Reporting to OSHPD - 1995, 1996, 1997

	1995	1996	1997
FQHCs	68	78	83
Look-alikes	14	16	21
RHCs	26	23	23
Other*	34	37	36

Table 1

*Other nonprofit licensed primary care clinics include those such as Planned Parenthood.

- ◆ At the end of 1995 there were 68 FQHCs in rural areas. By the end of 1996, FQHCs had increased by ten to 78 and to 83 by the end of 1997.
- ◆ FQHC look-alikes increased from 14 to 16 between 1995 and 1996 and again from 16 to 20 between 1996 and 1997.
- ◆ Nonprofit, independent Rural Health Clinics decreased from 26 to 23 and remained at that level by the end of 1997.
- ◆ Other clinics rose from 34 at the beginning of 1995 to 36 by the end of 1997.
- ◆ During the three-year period, many RHCs, FQHC look-alikes and Other clinics converted to FQHC status.

Appendix A contains a list of the licensed primary care clinics in rural areas that reported to OSHPD in each of the three years, whether or not data was included or complete.

All Clinics Reporting

California licenses nonprofit primary care

clinics as either community clinics or free clinics. Free clinics do not generally receive Medicaid (Medi-Cal) or Medicare reimbursement and are mainly supported by grants and donations. (see *Table 2*).

Licensed Nonprofit Primary Care Clinics Reporting to OSHPD (rural and urban) - 1995, 1996, 1997

	1995	1996	1997
Community Clinics	600	611	647
Free Clinics	25	28	28

Table 2

Clinics that reported to OSHPD by region with complete data: for 1995, 66 in the northern region, 41 in the central region, and 35 in the southern region; for 1996, 66 clinics in the northern region, 43 in the central region, and 35 in the southern region; for 1997, 80 in the north, 36 in the central, and 39 in the southern region. (see regional map on page 3).

Reporting Years

Percentage and number increases and decreases from year to year show trends only rather than to typify current status. **Data from clinics which are missing some or all of the data elements used in this report are not included.**

Data for 1998 is not yet available, but will be added to our next annual report.

Cost-Based Reimbursement

Clinics designated as FQHCs or independent RHCs are reimbursed for Medi-Cal and Medicare at reasonable and allowable costs. Both types of clinics are paid on an all-inclusive per-visit payment rate for Medicaid (Medi-Cal) and Medicare. Independent RHCs are also subject to a per visit reimbursement cap.

Hospital (provider-based) RHCs are reimbursed for the lesser of costs or charges, unless the hospital has more than 50 beds.

Summary of Selected Data - 1995, 1996, & 1997

Patient Profile

- ◆ Female patients between the ages of 20-34 accounted for the highest percentage of total patients for all three reporting years. Overall, males accounted for between 37%-39% for the three years while females totaled between 60%-62% of clinic patients.
- ◆ Patients seen in 1997 were poorer than those in 1995 and 1996. The percentage of patients below 100% of the federal poverty level (FPL) rose slightly between 1995 and 1996, and from 1996 to 1997. However the percentage of all rural patients between 100%-200% of the poverty level increased between 1995 and 1996, but only slightly between 1996 and 1997. The 100%-200% category is where most uninsured patients fall.
- ◆ Minorities, as a percent of the total patient population, decreased slightly between 1995 and 1996 and between 1996 and 1997. In terms of the number of minority patients, the total decreased between 1996 and 1997 by 5.9%.
- ◆ The number of farmworkers and their dependents at rural clinics as a percentage of total clinic patients increased by 9.5% between 1995 and 1996 and again by 21.5% between 1996 and 1997. Of greater note is the increase of 30.6% in farmworker/dependent encounters between 1996 and 1997.

Patient Utilization

- ◆ The number of patients utilizing primary care clinics in rural areas increased by 2.2% between 1995 and 1996, but decreased by 3.5% between 1996 and 1997.
- ◆ As a percent of total encounters, the farmworker and their dependents population group equaled between 17%-22% of total clinic encounters for all nonprofit clin-

ics in rural areas, which calculates to 2.7, 3.0 and 3.4 encounters per patient per year for each of the three reporting years. Average encounters per patient for all rural clinics was 3.1, 3.3, and 3.6 for the three reporting years.

Services Delivered

- ◆ In 1995, 1996, and 1997 general medicine led service encounters: patients aged 20+ followed by patients aged 0-12 and 13-19.
- ◆ Closely following were dental services to patients aged 20+ for each of the three reporting periods.

Financial

- ◆ Net patient revenue as a percentage of total operating revenue held at approximately 66% for the three reporting periods, with the remainder generated by contracts and grants.
- ◆ Thirty-three percent of all clinics reporting in 1996 and 45% of all clinics in 1997 experienced a net loss from operations.
- ◆ Net patient revenue as a percent of gross patient revenue increased slightly between 1995 and 1996 and between 1996 and 1997.
- ◆ Net income from operations fell from 7.1% in 1996 to 4.5% in 1997.

Comparison of Data - 1995, 1996, & 1997

Rural Demographics

- ◆ California's rural Hispanic population is 26.3% of the total rural population (1996 estimated population), but Hispanics make up approximately 46% of clinic patients in rural areas.
- ◆ Residents over the age of 65 comprise 15.5% of the rural population, but only 6% of clinic patients.
- ◆ The linguistically isolated rural population is 5.4% (those over the age of five who do not speak English as their primary language). This is a statewide average and does not reflect regional differences. For example, 2.6% of rural residents in the northern counties are linguistically isolated, 7.6% are in the central counties, and 6.2% in the southern counties. By contrast, 19.5% of patients at clinics in northern counties do not speak English as their primary language; 55.8% in central counties; and 41.6% in southern counties. *Table*

3 shows clinic patients in rural areas whose primary language is not English.

Clinic Patients in Rural Areas - English not Primary Language

	Patients	# Non-English	% Non-English
1995	572,336	220,336	38.5%
1996	584,927	218,901	37.4%
1997	570,674	209,731	36.8%

Table 3

See Appendix D for the demographics of residents in rural California.

Rural Clinic Patient Profiles

Age/Gender

- ◆ Females totaled approximately 60% of patients in 1995, 1996, and 1997 (*Figure 1*).
- ◆ Females between the ages of 20-34 constituted the highest percentage of clinic patients of any age/gender group for all three reporting periods.

3 shows

- ◆ Also shown in *Figure 1*, males and females less than one year of age comprised the smallest percentage of total clinic patients in 1995, 1996, and 1997.

Poverty Levels

- ◆ *Figure 2* displays poverty levels for rural clinic patients. As a portion of the total clinic population, patients at less than 100% of the federal poverty level remained static between 1995, 1996, and 1997.
- ◆ As a portion of the total clinic population, patients in the 100%-200% poverty category increased by 17.1% between 1995 and 1996 and leveled off between 1996 and 1997, increasing only 2.6%. This is generally the group who are uninsured.
- ◆ The rural population statewide at less than 100% of the poverty level is 15.5% compared to the rural clinic patient profile of approximately 50% for all three reporting years.

Race/Ethnicity

- ◆ *Figure 3* illustrates the race/ethnicity of clinic patients in 1995, 1996, and 1997. In 1995 and 1996, Hispanics were the largest percentage of patients in the rural clinic setting, followed by whites. Hispanics, as a percent of clinic patients, decreased by 3 percentage points between 1995 and 1997, while whites increased by 3 percentage points. The other race/ethnicity categories are distributed among the remaining 10% of clinic patients, which includes Native Americans, Filipinos, Pacific Islanders, Blacks, Asians, and other non-whites. In 1997 whites became the largest percentage of patients served.

Farmworkers and Dependents

- ◆ Urban and rural California contains several primary care clinics designated as farmworker clinics, which receive categorical funding from the California Department of Health Services (Seasonal Agriculture Workers Program) and some

receive funding from the federal government as Migrant Health Centers.

- ◆ Farmworkers and their dependents accounted for 21.0%, 19.0% and 23.1% of rural clinic patients for the three years respectively.
- ◆ Farmworkers and their dependents visited rural clinics less (2.7, 3.0, 3.4 encounters per patient per year) than the average of 3.1, 3.3, and 3.6 encounters per patient for all rural clinic patients for the three years (see *Figure 4*).

Figure 2

Figure 3

Figure 4

Data Source: 1995, 1996 & 1997 OSHPD Annual Utilization Report of Primary Care Clinics

Rural Clinic Utilization

Patients and Encounters

Figure 5 displays the number of patients served at the different clinic types: FQHCs, FQHC look-alikes, Rural Health Clinics, and Other clinics.

- ◆ The number of patients served by FQHCs increased by 3.3% between 1995 and 1996 but fell by 11.8% between 1996 and 1997.
- ◆ There was a 27.4% increase in patients for FQHC look-alikes between 1995 and 1996, and again by 22.3% between the 1996 and 1997 reporting periods, a correlation to an increase of 5 in the number of those types of clinics.
- ◆ RHC patients fell by 9.5% between 1995 and 1996 and increased by 5.9% between 1996 and 1997, though the number of RHC clinics reporting remained the same (23).

In Figure 6 the number of encounters for each clinic type is displayed.

- ◆ Encounters at FQHCs increased 12.3% at clinics in rural areas between 1995 and 1996 but only .3% between 1996 and 1997; FQHC look-alikes by 3.8% (from 1995 to 1996) and 19.2% (1996 to 1997); RHCs by 8.2% (1995 to 1996) and 5.3% (1996 to 1997).
- ◆ Figure 7 shows that encounters per patient remained static between the reporting years for RHCs, FQHC look-alikes, and Other clinics, but not for FQHCs, which demonstrated an increase every year.

Service Delivery Type

- ◆ Encounters by service delivery type are displayed in Table 4. General medical services account for over one-half of service delivery encounters for all three reporting years. Preventive procedures follow at approximately 11% and dental at approximately 10%.

Table 4

Financial Data

Gross and Net Patient Revenue

◆ *Figure 8* shows gross and net patient revenue for all clinics in rural areas. Net patient revenue as a percent of gross patient revenue decreased slightly from 79.1% to 78.2% between 1995 and 1996 but increased to 78.8 between 1996 and 1997.

Operating Revenue, Expenses and Net from Operations

Total operating revenue includes revenue from all sources: net patient revenue; federal grants and contracts; state grants and contracts; county grants and contracts; local grants and contracts; private grants and con-

tracts; HMO contracts; and donations.

Net patient revenue (collections) is gross charges minus contractual write-offs and bad debt. Net from operations is total operating revenue minus operating expenses.

- ◆ For 1995, 67 out of 142 clinics included in this report incurred a net loss from operations. Of the 14 FQHC look-alike clinics in that group, 8 incurred a net loss which, in the aggregate, totaled \$427,656.
- ◆ In 1996, 55 out of 144 clinics from this report experienced a net loss from operations. RHCs in that group totaled 23, of which 11 had a net operating loss. These 55 clinics represented 35% of all encounters for all primary care clinics in rural areas that year.

Data Source: 1995, 1996 & 1997 OSHPD Annual Utilization Report of Primary Care Clinics

- ◆ Forty-six of the 153 clinics that reported complete data to OSHPD in 1997 incurred a net loss from operations. Of the total (23) of independent, nonprofit RHCs, 12 incurred a net loss from operations totaling \$643,202.
- ◆ Total operating revenue from all sources increased 11.8% between 1995 and 1996 and 8.7% between 1996 and 1997.
- ◆ *Figure 9* shows total operating revenue, expenses, and net from operations for all clinics in rural areas in each of the three reporting years in absolute numbers. Net from operations as a percentage of total operating revenue was 6.0%, 7.1% and 4.5% for 1995, 1996, and 1997 respectively.
- ◆ In *Figure 10*, the components of total operating revenue shows that approximately 66% comes from net patient revenue with the remainder from contracts and grants.

Net Patient Revenue per Encounter by Clinic Type

- ◆ Net patient revenue per encounter increased between 1995 and 1996 for FQHC look-alikes (12.9%), whereas it decreased between those years for all other clinic types. Between 1995 and 1996, FQHC net patient revenue per encounter decreased by just .7%, RHCs by 5.5%, and Other clinics by 5.3%. See *Figure 11*.
- ◆ Between 1996 and 1997, FQHC look-alikes net revenue per encounter rose again substantially (13.2%) as did Other clinics (10.7%). FQHCs rose slightly (3.5%). RHCs again decreased (4.4%).

Charges/Collections by Payor Category

- ◆ *Figure 12* shows in graph and table form gross and net patient revenue for all clinics in rural areas by clinic type. Medi-Cal is the largest payor category. Medi-Cal gross patient revenue increased by 9.0% from 1995 to 1996 and 3.7% between 1996 and 1997.

Figure 8

Figure 9

Figure 10

Figure 11

FQHC Charges/Collections by Payor Category

- ◆ Shown in *Figure 13* is net patient revenue as a percentage of gross patient revenue for FQHC clinics in rural areas.
- ◆ Medi-Cal shows a slight increase in net patient revenue as a percent of gross patient revenue from 1995 to 1996 (95.0% to 95.6%) and a decrease from 1996 to 1997 (95.6% to 95.0%)
- ◆ After experiencing a large decrease between 1995 and 1996, the Self-Pay category rose from 39.0% to 49.4% between 1996 and 1997.

FQHC Look-Alike Charges/Collections by Payor Category

- ◆ In *Figure 14*, net patient revenue as a percentage of gross patient revenue increased substantially between 1995 and 1996 for the larger payor categories of EAPC (56.9% to 70.0%), and Self-Pay (52.3% to 69.8%). Between 1996 and 1997, the net patient revenue, as a percentage of gross patient revenue for these two categories, fell from 70.0% to 67.3% and 69.8% to 65.5% respectively.
- ◆ Between 1996 and 1997 there was a mix of percentage increases and reductions, but one category that dropped significantly was “all other payors” (99.7% to 64.7%).

Rural Health Clinic Charges/Collections by Payor Category

- ◆ Net patient revenue as a percent of gross patient revenue is shown in *Figure 15*. The payor categories showing the greatest change were “other state” (decreasing from 92.4% to 78.2%) and “other county” (increasing from 65.6% to 78.7%) between 1995 and 1996. The greatest change between 1995 and 1996 was CMSP (92.9% to 97.0%).

- ◆ Between 1996 and 1997, EAPC net patient revenue as a percentage of EAPC gross patient revenue increased substantially, from 71.9% to 85.8%.
- ◆ CHDP net patient revenue as a percentage of CHDP gross patient revenue declined from 85.4% to 67.2% between 1996 and 1997.
- ◆ Between 1996 and 1997, there was an increase in Medi-Cal and EAPC net patient revenue as percentages of gross patient revenue.

Other Clinics Charges/Collections by Payor Category

- ◆ The revenue sources and net patient revenue as a percent of gross patient revenue changes from 1995 to 1996 for Other Clinics are illustrated in *Figure 16*. The payor categories showing increases were Medi-Cal (64.8% to 71.2%) and Self-Pay (75.8% to 79.1%). Between 1996 and 1997, the two categories showing a decrease were Medi-Cal (71.2% to 69.3%) and Self-Pay (79.1% to 74.8%).
- ◆ All other significant payor categories decreased from 1995 to 1996: Medicare (66.6% to 60.7%), CHDP (86.6% to 79.8%), CMSP (59.6% to 54.3%), EAPC (54.8% to 52.1%), and Private Insurance (74.2% to 63.8%). The same payor categories decreased between 1996 and 1997.

Appendix C

Types of Clinics in Rural Areas

Independent Rural Health Clinics (P.L. 95-210)

Location	Ownership	Staffing	Governing Body	Reimbursement
Restricted to Health Professional Shortage Area or Medically Underserved Area in a non-urbanized area	May be owned and operated by a Physician (for profit) or nonprofit corporation	Licensed physician and licensed NP, PA, or CNM	Administrator must be designated and a governing board kept informed	100% cost reimbursement subject to a cap (currently \$60.40) per-visit rate, which is composite for total charges. Medicare/Medicaid payment is an interim payment subject to annual cost report reconciliation

Hospital Provider-Based Rural Health Clinic (P.L. 95-210)

Location	Ownership	Staffing	Governing Body	Reimbursement
Restricted to Health Professional Shortage Area or Medically Underserved Area in a non-urbanized area	Licensed, governed and supervised with other hospital departments	Licensed physician licensed NP, PA, or CNM	Administrator must be designated and a governing board kept informed	Cost reimbursement, lower of cost or charges unless hospital has greater than 50 beds. If greater than 50 beds, subject to both Medicare and Medicaid caps. Medicare/Medicaid payment is an interim payment subject to hospital's annual cost report; cost settlement is based on all outpatient departments aggregated together.

Federally Qualified Health Center

Location	Ownership	Staffing	Governing Body	Reimbursement
Restricted to Medically Underserved Area	Nonprofit, tax-exempt or public	No mid-level requirement	Separate community board of directors	Cost reimbursement subject to a cap (currently \$87.93 in rural areas) per-visit rate, which is composite of total charges. Medicare/Medicaid payment is an interim payment subject to annual cost report reconciliation.

There are many other differences, such as scope of services, financial reports, deductibles for Medicare, sliding fee scale requirements, and services covered just to name a few.
